INTRODUCTION

The National Restaurant Association conducted a mail consumer survey in March and April of this year to collect information on individual meal consumption behavior. The results of this survey include information from 14,255 individuals concerning where their meals were prepared and what meals were skipped. (For more detailed information concerning this survey, please see the section or survey methodology found on page 2.)

The information presented in this report supplements and expands upon information collected by CREST (Consumer Reports on Eating Share Trends) and Gallup. CREST provides us with data on meals eaten away from home only, while Gallup records eating out behavior for individuals 18 years and older. This survey allows us to focus on individual meal consumption behavior, both at home and away from home, for consumers aged 8 and over.

NRA conducted a similar survey in April and May 1981, however the 1985 results provide a more detailed division of the sample by age and income than the 1981 survey. Caution should be exercised when using age and/or income as the basis of comparison between results of the two studies. In addition, the 1985 study includes information concerning the meal consumption behavior of working females, a group whose behavior was not analyzed separately in the 1981 study. Furthermore, a new way of looking at the family unit is used in addition to the previous "number of members" classification. In this case, the family unit is classified and analyzed according to the age of the youngest child.

We believe that this NRA consumer study will provide valuable information to the restaurateur. The results from this report may be used not only in planning advertising and promotional campaigns but also in identifying potential new markets and market segments.

SURVEY METHODOLOGY

In March and April the National Restaurant Association, under contract with National Family Opinion, Inc. (NFO) of Toledo, Ohio, conducted a consumer study to determine where an individual's meals were prepared and/or consumed and which meals, if any, were skipped. Questionnaires were mailed to 10,000 households who participate in NFO's consumer mail panel. This cross-section of households conforms to the latest available U.S. Census data for the nine geographic divisions and within each division by population density, age of homemaker, annual household income and household size.

Respondents were asked to record for the past seven days, for the five household members (age eight and over and living at home) the number of meals prepared privately (or at a friend's home), prepared commercially (in a restaurant or school/work cafeteria) or skipped.

Of the 10,000 questionnaires mailed to panel members, 6,788 were returned including information on 14,255 individuals aged 8 and older. The 68 percent response rate was higher than the response rate from the 1981 meal consumption report, where 62 percent of all questionnaires mailed out were returned. A detailed comparison of the characteristics of households that completed the questionnaire with characteristics of the total sample is presented on page 56.

USER NOTES

This publication includes many summary tables as well as more detailed descriptive statistics. In order to assist the reader, these tables have been grouped into five sections in the following manner:

Section I. Meal Behavior: Individual Characteristics -- Includes information by meal occasion, place of preparation, sex and age.

Section II. Meal Behavior: Household Characteristics -- Includes information by meal occasion, place of preparation, household income, household size, household composition and employment status of female household head.

Section III. Breakfast -- Includes individual and household meal consumption behavior for breakfast.

Section IV. Lunch -- Includes individual and household meal meal consumption behavior for lunch.

Section V. Dinner -- Includes individual and household meal consumption behavior for dinner.

Section VI. Appendix -- Includes detailed tables on individual and household meal consumption behavior for all meal occasions.

A word of caution to all readers. All data are based on a seven day period. Due to incomplete responses and/or range estimates made by respondents, weekly mean number of meals may not always total seven. In addition, totals may not always add to 100% due to rounding. Readers who have any further questions concerning this survey information should contact the National Restaurant Association, Research and Information Service Department, 311 First Street, N.W., Washington, DC 20001 or call (202) 638-6100.

EXECUTIVE OVERVIEW

o The average individual, age 8 or older, consumes 3.7 meals per week away from home in 1985, up from 3.5 meals in 1981.

o The actual number of meals served away from home rose 8.2 percent between 1981 and 1985. This represents a "real" increase of 4.5 percent after adjusting for the 3.7 percent gain in the population age 8 or older.

o Of all weekly meals, seven out of 10 are prepared at home or at a friend's home, two out of 10 are prepared commercially (at restaurants or school/work cafeterias) and one out of 10 is skipped. These proportions are similar to those in 1981.

o Lunch is the meal most likely to be eaten away from home, with 54 percent stating they had eaten commercially prepared food for lunch at least once in the past week in 1985 versus a somewhat lower 51 percent in 1981.

o Nearly half (49 percent) reported they had eaten dinner in a restaurant at least once in the past week in 1985, up slightly from 47 percent in 1981.

o Two out of 10 individuals (18 percent) stated they had eaten out for breakfast at least once in the past seven days compared with 15 percent in 1981.

o Men eat out more frequently than women, 4.2 times per week versus 3.4 times.

o However, women have increased their eating out occasions considerably more than men, and this is especially true for lunch. In 1981, 46 percent of the female respondents reported at least one lunch prepared commercially, and in 1985 this proportion jumped to 51 percent. The proportion for male respondents remained virtually unchanged--55 percent in 1981 and 56 percent in 1985.

o Females who are employed, either full time or part time, eat out more often than those who are not employed outside the home--4.3 times per week versus only 2.9 times a week.

o Individuals 18 to 24 years old and 25 to 34 years old tend to eat out more frequently than others--4.8 times and 4.0 times a week, respectively, versus 3.7 times for all consumers.

o Senior citizens tend to eat out infrequently, with only 1.8 of their weekly meals prepared commercially.

o Singles tend to eat out more often than members of other households. During an average week, singles will consume 4.3 meals away from home.

o Individuals from upper income households dine away from home more frequently than those from lower income households. Respondents from households with annual incomes over $50,000 reported 4.7 meals away from home per week and those from households earning $35,000 to $50,000 reported 4.5 meals out. In comparison, those from households with incomes under $10,000 and $10,000 to $15,000 reported significantly fewer weekly restaurant meals--2.8 and 3.1 respectively.

SECTION I

MEAL BEHAVIOR: INDIVIDUAL CHARACTERISTICS

MEAL BEHAVIOR: INDIVIDUAL CHARACTERISTICS

HIGHLIGHTS

o The average individual, age 8 or older, consumed 3.7 meals per week away from home in 1985. Approximately 14 weekly meals were prepared at home or at a friend's home and 2.2 meals were skipped in the past seven days.

o Men eat out more frequently than women, 4.2 times per week versus 3.4 times. However, both men and women skip an average of 2.2 weekly meals.

o Young adults between the ages of 18 and 24 consumed 4.8 meals away from home during the seven-day period. This is substantially higher than the 1.7 meals per week which senior citizens (age 65 and over) reported having eaten away from home.

o More people eat out for lunch than for any other meal. Over half the respondents reported that they had eaten lunch in a restaurant or school/work cafeteria at least once in the past week compared with 49 percent who stated they ate dinner in a restaurant at least once during the survey period. A lower two out of ten individuals reported consuming breakfast away from home at least once.

SECTION II

MEAL BEHAVIOR: HOUSEHOLD CHARACTERISTICS

MEAL BEHAVIOR: HOUSEHOLD CHARACTERISTICS

HIGHLIGHTS

o Individuals from upper income households eat out more often than individuals from households with lower incomes. Consumers from households with annual incomes in excess of $35,000 consumed 4.8 meals away from home in the seven days. In comparison, individuals from households with incomes less than $35,000 ate out an average of 3.4 times per week.

o Singles eat out more frequently than couples for all meal occasions. One out of four singles consumed breakfast away from home at least once in the week compared with a lower 17 percent of couples. Over half of the singles surveyed reported having eaten lunch at a restaurant or school/work cafeteria at least once during the seven-day period versus 45 percent of couples. However, similar proportions of singles and couples reported eating dinner out at least once, 51 percent and 48 percent respectively.

o Families with pre-school children eat out less often than older families (families in which the youngest child is 18 years or older), 3.4 times per week versus 3.6 times. Families in which the youngest child is between the ages of 6 and 17 consumed an average of 4.4 meals per week away from home; however, a disproportionate number of these meals are eaten in school lunchrooms.

o Working women consumed 4.3 meals away from home in the seven-day period in 1985 compared with 2.9 meals eaten out by women who are not employed or retired. In addition, women who work, either part time or full time, skip more meals than other women, 2.4 versus 1.7

SECTION III

BREAKFAST

BREAKFAST HIGHLIGHTS

o Eight out of 10 respondents reported eating one or more breakfasts prepared at home or at a friend's home in the past week in 1985.

o Individuals consumed, on average, 0.5 commercially prepared breakfasts in the past week in 1985, up from 0.4 in 1981.

o The majority of weekly breakfasts were prepared at home or at a friend's home in 1985. Seven out of ten (71 percent) breakfasts were prepared privately, two out of ten (22 percent) were skipped and one out of ten (7 percent) breakfasts were prepared commercially.

o Individuals from households with incomes between $35,000 and $49,999 tend to consume more commercially prepared breakfasts, with 21 percent stating they had eaten out for breakfast at least once in the past week.

o Eight out of 10 respondents from households with five or more members had breakfasts prepared at home at least once in the past week.

o Singles reported eating out for breakfast more often than any other household group. One-fourth stated they had purchased breakfast from a restaurant at least once in the past week. This group also skips breakfast more often--four out of 10 reported skipping at least one breakfast in the past week.

o Respondents from families in which the youngest child is between the ages of 13 and 17 reported eating breakfast away from home more often. In the past week, two out of 10 stated they had eaten out for breakfast.

o One third of the individuals from households with a working woman skipped breakfast at least once in the past seven days. In addition, two out of 10 consumed breakfast in a restaurant or school/work cafeteria at least once in the past week compared with one out of 10 non-employed women for respondents from households where the female head does not work outside the home.

SECTION IV

LUNCH

LUNCH HIGHLIGHTS

o Fifty-four percent of all respondents reported purchasing lunch at least once in the past seven days.

o Individuals consume, on average, 3.9 lunches which were prepared at home or at a friend's home and 2.1 lunches which were prepared commercially.

o Approximately one-third of weekly lunches are eaten in a restaurant or school/work cafeteria.

o Two-thirds of the individuals from households with annual incomes in excess of $50,000 purchased a prepared lunch from a restaurant one or more times in the past week.

o Individuals from two member households ate out for lunch less often than other households, with 45 percent reporting they had eaten commercially prepared lunch at least once in the past seven days. On the other hand, over half (58.2 percent) those from households with five or more members reported eating out for lunch at least once.

o Respondents from families in which the youngest child is between the ages of 13 and 17 tend to purchase more lunches from restaurants or school/work cafeterias in one week than do those from families in which the youngest child is under six, 2.8 times versus 2.0 times.

o Respondents from households where the female head is employed eat lunch in a restaurant or cafeteria more often than those from households with non-employed females--2.5 times versus 1.6 times.

SECTION V

DINNER

DINNER HIGHLIGHTS

o Half of all respondents reported eating dinner away from home at least once in the past week in 1985.

o In the past seven days, individuals consumed, on average, 1.1 commercially prepared dinners and 5.4 dinners which were prepared at home or at a friend's home.

o Eight out of 10 weekly dinners were prepared at home or at a friend's home in the past week compared with two out of 10 which were prepared commercially.

o Individuals from upper income households tend to consume dinner away from home more often than individuals from lower income households. Sixty percent of those from households with annual incomes greater than $35,000 reported eating dinner away from home at least once in the past week.

o Individuals from large families are least likely to eat dinner away from home. Forty-four percent of individuals from families with five or more members consumed dinner at least once in a restaurant in the past week. In comparison, 52 percent of individuals from families with four members, reported having eaten dinner in a restaurant at least once in the past week.

o Over half the individuals from families in which the youngest child is between the ages of 13 and 17 reported eating dinner away from home at least once in the previous seven days.

o Respondents from households where the female head is employed consumed 1.2 dinners away from home in the past week. In comparison, those from households where the female head is not employed, consumed 0.9 commercially prepared dinners in the previous seven days.

o Singles consumed 1.4 commercially prepared dinners in the past seven days.

ANSWER OTHER SIDE FIRST 01681

4. Record for the PAST 7 DAYS, for the 5 oldest household members (age 8 or over and living at home) the number of meals prepared privately at home (or a friend's home) or prepared commercially (in a restaurant, school or work cafeteria). If you respond for another person and do not recall the number of meals please ask that individual. The total # for each meal for each household member must = 7.

Do not include any between meal snacks. HOUSEHOLD MEMBERS: AGE	SEX	BREAKFAST: PREPARED PRIVATELY AT HOME OR AT FRIEND'S HOME	BREAKFAST: PREPARED COMMERCIALLY (restaurant, school or work cafeteria)	BREAKFAST: SKIPPED BREAKFAST	LUNCH: PREPARED PRIVATELY AT HOME OR AT FRIEND'S HOME	LUNCH: PREPARED COMMERCIALLY (restaurant, school or work cafeteria)	LUNCH: SKIPPED LUNCH	DINNER: PREPARED PRIVATELY AT HOME OR AT FRIEND'S HOME	DINNER: PREPARED COMMERCIALLY (restaurant, school or work cafeteria)	DINNER: SKIPPED DINNER
